

Introduction to the Pythagorean Theorem

McKailee Bishop

Abstract

In this presentation, we will discuss the life of Pythagoras and the contributions he has made to mathematics. We will also have a guided activity that will help you practice proving the Pythagorean Theorem in multiple ways.

Runnin' Around with the Rubik's (Part III)

Allison Romero

Abstract

In this continuation of "Running with the Rubik's," I will be talking not only about the methods to solving, the algebra behind the possibilities, but also real world application. The real world application process will be related to computer science to show that it is much more than just a puzzle. This addition makes it much more applicable to everyone's everyday life. The algorithms are important in more than just the solving aspect of the Rubik's cube.
